

Data Science Project (SCQF level 8)

Feedback

– Outcome 1: *Collaborate with a team in a data science project.*

The Pythonistas you have successfully achieved task 1 and 2 covering Outcome 1.

Noted below is the marking rubric for Outcome 1 - Collaborate with a team in a data science project. I also referred to the Teams meeting and online posts before marking your project proposal.

This is a good and well organised proposal. The problem is interesting and relevant, with a thoughtful hypothesis and a good statistical plan. Ethical considerations are addressed, though could be slightly expanded. Excellent planning and teamwork structure. Keep up the great work! 👍

Summary of Feedback – Data Science Project Proposal

Strengths:

- **Clear Problem Definition:** The proposal effectively identifies a real-world issue in the chess community, supported by a compelling hypothesis and rationale.
- **Strong Justification:** The importance of the issue is well explained, highlighting its relevance to players, coaches, and data science learners.
- **Thorough Project Planning:** Team roles are clearly defined and appropriate, with a well-structured plan that aligns with the PPDAC framework.
- **Effective Use of Tools:** Collaboration tools for communication, version control, and task management are thoughtfully selected and described.

Area for Improvement:

- **Ethical Considerations:** While bias, privacy, and transparency are addressed, the proposal could be strengthened by providing more detail on fairness in methodology and potential data limitations.

Next Steps

Outcome 2 - Carry out an analysis of a large, complex dataset.

- Refer to your proposed key milestones and timeline, start following your project schedule
- Arrange your next meeting with me, if required.

Data Science Project (SCQF level 8)

Feedback

– Outcome 1: *Collaborate with a team in a data science project.*

MARKING RUBRIC

Task 1: Identifying a Real-World Issue (12 Marks)

Criteria	Excellent (4)	Good (3)	Satisfactory (2)	Needs Improvement (1)	Marks
Clear Problem Identification	Clearly defines a specific, real-world issue with supporting data sources and strong rationale.	Defines a general issue but lacks detailed focus or supporting data.	Issue is vague or only loosely related to real-world applications.	No clear problem statement or issue is unclear.	4
Justification of Importance	Strong business, societal, and scientific justification with explained implications.	Justifies the issue with some societal, business, or scientific impact	Limited justification, lacks depth in explaining impact.	No justification or weak reasoning provided.	4
Ethical Considerations	Addresses data privacy, bias, and fairness	Mentions some ethical concerns.	Brief mention of ethics, but not well integrated into the project plan.	No ethical considerations discussed.	3

Total for Task 1: 11/12

Data Science Project (SCQF level 8)

Feedback

– Outcome 1: *Collaborate with a team in a data science project.*

Task 2: Team Roles & Project Planning (12 Marks)

Criteria	Excellent (4)	Good (3)	Satisfactory (2)	Needs Improvement (1)	Marks
Defined Team Roles	Clearly assigned roles & responsibilities, covering all aspects of the project	Team roles are mostly defined but some overlap or missing details.	Some roles are unclear or incomplete, but general structure exists.	No clear team roles assigned.	4
Project Plan & PPDAC Alignment	Structured project plan with alignment to the PPDAC lifecycle (Problem, Plan, Data, Analysis, Conclusion).	Project plan is well-structured but weak in aligning with PPDAC stages.	Basic project plan, missing key details or unclear methodology.	No structured project plan or unclear methodology.	4
Use of Collaboration Tools	Clearly defines tools for communication, version control, and project management, with specific platforms named.	Mentions some tools but lacks clarity on how they will be used effectively.	Collaboration tools are mentioned but not well-integrated into the workflow.	No mention of tools or collaboration methods.	4

Total for Task 2: 12/12
